Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-22 are rejected under 35 U.S.C. 102(b) as being anticipated by Ohara et al (6097683).

Each of the independent claims is drawn to an alternative limitation "one or more of".

Thus only one of the limitations is to be shown in order to meet the claimed invention.

The independent claim merely read on reading the medium and if an error has occurred than the error location is stored in a primary or secondary defective lists. Such limitation is inherently present in every optical disk media having a PDL and SDL storing the location of the defective segments on the disk. The claims also read on re-recording the data on a different location if an error has occurred based on the well-established "skipping method" or the "replacement method". The reference shows an optical disk defective management apparatus comprising an optical head for reading the data on an optical medium where data is recorded, taking a corrective action if defective data is encountered by verifying the recorded data be re-recording the data on a different area of the disk column 15 lines 35-40. regarding claim 22., the limitation "front end" and "back end" processors are merely programs to control the corrective steps when an error has occurred and since the reference shows a corrective steps meeting the claimed limitations. Such limitations are present.
